

FoodBridge

AI-powered food waste compliance & community redistribution

SDG 12 Responsible Consumption	SDG 10 Reduced Inequalities	SDG 13 Climate Action
---	--	------------------------------------

Every year, 60M tonnes of food is wasted across the EU - while 40M citizens cannot afford a quality meal every second day.

THE PROBLEM The EU Waste Framework Directive (Oct 2025) now mandates a 30% reduction in restaurant, grocery's stores, household food waste by 2030 - yet 1.8M+ SME food businesses across Europe have no affordable, accessible tool to measure, report, or act on this obligation. Enterprise platforms (Winnow, Leanpath) start at €12–18K/year. SMEs are locked out. Meanwhile, community food organisations receive whatever surplus arrives - with no forecasting, no planning, and no link to real-time restaurant supply. <i>Food waste generates ~8% of global greenhouse gas emissions. The systemic gap between regulatory pressure and SME capability is costing the EU an estimated €143B in lost economic value annually.</i>	OUR SOLUTION FoodBridge converts EU compliance infrastructure into a community food security engine - the first affordable platform built specifically for SME restaurants. How it works - Daily waste scan: 60-second mobile camera scan using computer vision classifies food type and estimates weight. - AI surplus prediction: A time-series model learns each venue's ordering and prep patterns, forecasting surplus 24-48 hrs ahead. - Real-time redistribution: Geo-targeted alerts notify registered NGOs, food banks, and community kitchens when surplus is confirmed. Redistribution is a downstream pathway, not an automatic outcome - FoodBridge identifies the share of surplus that remains safe and suitable for donation at an earlier stage, before it becomes waste. - Automated compliance: EU Waste Framework Directive reports generated automatically - turning a regulatory burden into a business asset. <i>Restaurants receive a Social Impact Certificate quantifying meals redirected - a powerful, low-cost marketing asset.</i>	MARKET & TRACTION TAM: 1.8M+ EU food service businesses facing a mandatory compliance deadline. Pricing: €89-149/month per venue. Total addressable revenue: €1.9-3.2B/year in Europe. Three go-to-market channels - Direct SME subscription (Dublin beachhead, scaling EU-wide) - White-label API for hospitality trade associations - Local council licensing - public sector compliance revenue Technology edge CV waste classification · LSTM surplus prediction model trained on venue-specific 90-day purchase-to-waste ratio · Redistribution matching algorithm · Compliance report API built to EU Waste Framework Directive schema. Proprietary data moat After 12 months across 200+ venues, FoodBridge holds the EU's most granular SME food waste dataset - licensable to councils, insurers, and supply chain auditors as a second revenue stream.

STRATEGIC ROADMAP		
Phase 1 · Months 1-4 MVP: waste scan app + redistribution matching. Pilot with 20 Dublin restaurants and 5 community partners (FoodCloud, Dublin Simon Community). Prove waste reduction data.	Phase 2 · Months 5-9 Add AI surplus prediction model. Generate first EU Waste Framework Directive compliance reports. Expand to 200+ Irish venues and 3 council partnerships. Target €200K ARR.	Phase 3 · Months 10-18 Compliance API launch. Expand to UK, Germany, France. 2,000+ venues, €1M+ ARR. Series A raise targeting €3M for EU-wide scale. Partnership with Government for funding and mandate.

POTENTIAL IMPACT (Year 2)

500K+ kg food waste diverted	1.2M+ meals redistributed	2,000+ SME venues compliant

FEASIBILITY & TEAM

Dublin-based beachhead - Ireland's food service sector provides an immediate, regulation-aligned pilot market within the EU's legal jurisdiction.

No-code/low-code MVP stack. Year 1 team of 5. Bootstrap to MVP, venture funding at Phase 3. Founder background spans food service operations, AI product, and EU market GTM.

Early community partner conversations underway with FoodCloud (Ireland's leading food redistribution platform) and Bia Food Initiative, Dublin.
